

Relax Your Arm™

Evoluent™ Mouse-Friendly Keyboard™

The full function keyboard that makes room for your mouse

Your mouse here.

Where your mouse would be with an ordinary keyboard.

Ordinary Keyboard

An ordinary keyboard has a numeric keypad where the mouse should be. Your mouse is too far away.

An ordinary keyboard forces your arm to stretch outward to reach the mouse.

Evoluent™ Mouse-Friendly Keyboard™

The Evoluent Mouse-Friendly Keyboard has a numeric keypad on the left. Your mouse can be much closer on the right.

The Evoluent Mouse-Friendly Keyboard allows your mouse to be directly in front of your shoulder. Your arm is in a relaxed neutral position when using the mouse.

- Eliminates stretching your arm to reach the mouse by having the numeric keypad on the left. Your mouse can be much closer on the right.
- Allows your right arm to be in a relaxed neutral position when using the mouse.
- Reduces the need to remove your hand from the mouse by allowing your left hand to operate Enter, Del, Page Up, Page Down, arrows, and other keys in the numeric keypad on the left.
- Duplicate Page Up, Page Down, Home, End, Del, and arrow keys on the right.
- Full size arrows, Del, F's, Ctrl, and Alt keys for easy operation.
- Extra Del key at the left end of the spacebar allows left hand operation so you can keep your right hand on the mouse.
- Tactile bumps on often used keys such as Del, End, Page Down, Ctrl, and down arrow to aid operation by touch.
- Hot keys for one touch access to the Internet, e-mail, media player, volume control, standby, power off, and other functions.
- High quality, notebook computer-type key mechanisms with precision feel.
- Only 1/2 inch or 12.5 mm thick overall with ultra flat key caps.

Requires
Microsoft Windows®

USB only
