## Automated Wall Mount

---

This device complies with part 15 of the FCC rules. Operation is subject to the following 2 conditions: (1) This device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits of a Class B digital device, pursuant to Part 15 of the FCC rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy, and if not installed and used in accordance with the instructions, may cause harmful interference to radio or television communications. However, there is no guarantee that the interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one of the following measures:

- Reorient or relocate the receiving antenna
- Increase the separation between the equipment and receiver
- Connect the equipment to an outlet on a circuit other than that to which the receiver is connected

Consult the dealer or an experienced radio/TV technician for help.

## DISCLAIMER

Milestone AV Technologies, and its affiliated corporations and subsidiaries (collectively, "Milestone"), intend to make this manual accurate and complete. However, Milestone makes no claim that the information contained herein covers all details, conditions or variations, nor does it provide for every possible contingency in connection with the installation or use of this product. The information contained in this document is subject to change without notice or obligation of any kind. Milestone makes no representation of warranty, expressed or implied, regarding the information contained herein. Milestone assumes no responsibility for accuracy, completeness or sufficiency of the information contained in this document.

## IMPORTANT SAFETY INSTRUCTIONS

**WARNING** alerts you to the possibility of serious injury or death if you do not follow the instructions.

**CAUTION** alerts you to the possibility of damage or destruction of equipment if you do not follow the corresponding instructions.

**WARNING:** FAILURE TO READ AND FOLLOW THE FOLLOWING INSTRUCTIONS CAN RESULT IN SERIOUS PERSONAL INJURY, DAMAGE TO EQUIPMENT OR VOIDING OF FACTORY WARRANTY. It is the installer's responsibility to make sure all components are properly assembled and installed using the instructions provided.

When using an electrical mounting system, basic precautions should always be followed, including the following:

**READ ALL INSTRUCTIONS BEFORE USING THIS PRODUCT!!!!**

**DANGER:** TO REDUCE THE RISK OF ELECTRIC SHOCK:

1. Always turn off power at source before cleaning.

**WARNING:** TO REDUCE THE RISK OF BURNS, FIRE, ELECTRIC SHOCK, OR INJURY TO PERSONS:

- Always turn off power at source before putting on or taking off parts.
- Use this mounting system only for its intended use as described in these instructions. Do NOT use attachments not recommended by the manufacturer.
- Never operate this mounting system if it has a damaged cord or plug. If it is not working properly during testing, return the mounting system to a service center for examination and repair.
- Keep the power cord away from heated surfaces.
- Never operate the mounting system with the air openings blocked. Keep the air openings free of lint, hair, and the like.
- Never drop or insert any object into any opening.
- Do not use outdoors unless marked for outdoor use.
- Route cords and cables as shown in the installation instructions.
- To disconnect, turn all controls to the off position, then turn off power at source.

**WARNING:** RISK OF ELECTRIC SHOCK!  
Connect this mounting system to a properly grounded outlet only. See Grounding Instructions.

**CAUTION:** Changes or modifications to this unit not expressly approved by the manufacturer can void the units FCC compliance rating and make the unit illegal to operate.

**WARNING:** Failure to provide adequate structural strength for this component can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the structure to which this component is attached can support five times the combined weight of all equipment. Reinforce the structure as required before installing the component.

**WARNING:** Exceeding the weight capacity can result in serious personal injury or damage to equipment! It is the installer's responsibility to make sure the weight of all components attached to the PXR does not exceed 150 lbs (68.0 kg).

**NOTE:** This system has no user serviceable parts.

## TOOLS REQUIRED FOR INSTALLATION

## PARTS

## SITE PREPARATION

### Locating and Preparing a Mounting Site

The PXR was designed to be installed onto a 16" on center 2" x 4" wood stud or solid concrete wall; or into the PAC-502 in-wall box (not included).

**WARNING:** IMPROPER INSTALLATION CAN LEAD TO MOUNT FALLING CAUSING SERIOUS PERSONAL INJURY OR DAMAGE TO EQUIPMENT! It is the installer's responsibility to make sure the structure to which the PXR is being installed is capable of supporting five times the combined weight of the PXR and all attached equipment, not to exceed 150 lbs (68.0 kg).

1. Identify suitable wall location for the PXR to be installed taking into consideration the outward extension (60" minimum) and right to left turning of the display (depends upon display size).

**IMPORTANT ! :** Ensure that PXR location allows required clearance around display as outlined in display documentation.

2. Ensure that an area from the point of PXR wall attachment outward and surrounding the PXR is left open and doesn't contain anything that may impede movement of the PXR. (See Figure 1)

**IMPORTANT ! :** Ensure there is ALWAYS enough space for access to remove the display from the PXR.

Figure 1

Figure 2

### Power Requirements and Wiring

The PXR requires 100-250VAC, 50/60 Hz power to operate.

**IMPORTANT ! :** This product must be grounded. If it should malfunction or break down, grounding provides a path of least resistance for electric current to reduce the risk of electric shock.

### Grounding Instructions

This product is equipped with a cord having an equipment-grounding conductor and a grounding plug. The plug must be plugged into an appropriate outlet that is properly installed and grounded in accordance with all local codes and ordinances.

**WARNING:** RISK OF ELECTROCUTION! All electrical wiring required for installation should be installed by a qualified electrician.

## PXR DIAGRAM

Figure 3

## INSTALLATION

**WARNING: AVOID PERMANENTLY DAMAGING THE PXR!!** NEVER use the PXR as a vertical lift! ONLY operate the PXR when securely mounted in a vertical position! NEVER operate the PXR while it is lying down or tilting back!

**IMPORTANT ! :** When considering the PXR location, keep in mind that the distance from the lowest edge of the PXR assembly to the center of the interface brackets (which will also be the center of the display) is 9.93" (252mm). The distance from center of the mounting hole in the mounting bracket to the center of the display is 9.19" (233mm). (See Figure 4) and (See Figure 9)

**NOTE:** Proceed to either the **Installing to a Wood Stud Wall**, **Installing to a Solid Concrete Wall**, or **Installing in an In-Wall Box** section.

### Installing to a Wood Stud Wall

1. Using a stud finder, locate and mark the two 16" on center 2" x 4" wood studs to which the PXR will be mounted.
2. Determine point for lowest edge of PXR and mark studs.
3. Use a level to join the marked points and mark the lowest edge of PXR. (See Figure 4)
4. Place mounting bracket (X) along marked line on top of level, and mark location of pilot holes. (See Figure 4)

5. Drill two 7/32" x 2-3/4" (5.5mm x 69.9mm) pilot holes at locations marked in Step 4. (See Figure 4)

Figure 4

**WARNING:** ELECTRICAL SHOCK HAZARD! CUTTING OR DRILLING INTO ELECTRICAL CORDS OR CABLES CAN CAUSE DEATH OR SERIOUS PERSONAL INJURY! ALWAYS make certain area behind mounting surface is free of electrical wires and cables before cutting, drilling, or installing fasteners.

**WARNING:** EXPLOSION AND FIRE HAZARD! CUTTING OR DRILLING INTO GAS PLUMBING CAN CAUSE DEATH OR SERIOUS PERSONAL INJURY! ALWAYS make certain area behind mounting surface is free of gas, water, waste, or any other plumbing before cutting, drilling, or installing fasteners.

6. Attach mounting bracket (X) to wall with two 5/16 x 2-1/2" lag screws (RC) and two 5/16" flat washers (RB). (See Figure 5)

Figure 5

7. Lower PXR (Q) onto mounting bracket (X), ensuring PXR fits over mounting bracket tabs. (See Figure 6)
8. Mark the pilot holes through PXR upper bracket. (See Figure 7)
9. Carefully remove the PXR from the mounting bracket.
10. Drill two 7/32" x 2-3/4" (5.5mm x 69.9mm) pilot holes at locations marked in Step 9.

Figure 6

Figure 7

11. Connect and route power cord (Z) through PXR cable management areas. (See Figure 8)

**IMPORTANT !** : Do not power the PXR until it is ready to be tested. See **Set-Up and Configuration** section.

Figure 8

12. Return PXR to mounting bracket and fasten to wall using two 5/16 x 2-1/2" lag screws (RC) and two 5/16" flat washers (RB). (See Figure 7)

**NOTE:** Proceed to **Arm Engagement** section.

### Installing to a Solid Concrete Wall

**WARNING:** INSTALLING THE PXR IN UNDERRATED OR DAMAGED CONCRETE CAN LEAD TO SERIOUS INJURY OR DAMAGE TO PRODUCT! When installing into concrete, only install the PXR in a solid concrete wall made of 2500 PSI (17.3 MPa) or stronger concrete. Never install the PXR into cracked, chipped or flaking concrete.

1. Determine point for lowest edge of PXR.
2. Use a level to mark the lowest edge of PXR. (See Figure 9)
3. Place mounting bracket (X) along marked line on top of level, and mark location of pilot holes. (See Figure 9)
4. Drill two 5/16" x 3-1/4" (M8 x 82.5mm) pilot holes at locations marked in Step 3. (See Figure 9)

Figure 9

**WARNING:** ELECTRICAL SHOCK HAZARD! CUTTING OR DRILLING INTO ELECTRICAL CORDS OR CABLES CAN CAUSE DEATH OR SERIOUS PERSONAL INJURY! ALWAYS make certain area behind mounting surface is free of electrical wires and cables before cutting, drilling, or installing fasteners.

**WARNING:** EXPLOSION AND FIRE HAZARD! CUTTING OR DRILLING INTO GAS PLUMBING CAN CAUSE DEATH OR SERIOUS PERSONAL INJURY! ALWAYS make certain area behind mounting surface is free of gas, water, waste, or any other plumbing before cutting, drilling, or installing fasteners.

**IMPORTANT !** : The anchors must be installed through any wall covering until flush with the concrete wall. (See Figure 10)

**Figure 10**

5. Install two anchors (RA) into pilot holes. Tap with hammer until flush with concrete surface. (See Figure 11)
6. Attach mounting bracket (X) to wall with two 5/16 x 2-1/2" lag screws (RC) and two 5/16" flat washers (RB). (See Figure 11)

**Figure 11**

7. Lower PXR (Q) onto mounting bracket, ensuring PXR fits over mounting bracket (X) tabs. (See Figure 7)
8. Mark the pilot holes through PXR upper bracket. (See Figure 12)
9. Carefully remove the PXR from the mounting bracket.
10. Drill two 5/16" x 3-1/4" (M8 x 82.5mm) pilot holes at locations marked in Step 8. (See Figure 12)
11. Install two anchors (RA) into pilot holes. Tap with hammer until flush with concrete surface. (See Figure 10) and (See Figure 12)

12. Connect and route power cord (Z) through PXR cable management areas. (See Figure 13)

**IMPORTANT !** : Do not power the PXR until it is ready to be tested. See **Set-Up and Configuration** section.

13. Return PXR to mounting bracket.

14. Fasten PXR to wall using two 5/16 x 2-1/2" lag screws (RC) and two 5/16" flat washers (RB). (See Figure 12)

**Figure 12**

**Figure 13**

**NOTE:** Proceed to **Arm Engagement** section.

### Installing in an In-Wall Box

The following procedure assumes that a Chief Listed Model PAC502 In-Wall accessory (not included) has previously been installed following the installation instructions provided with the PAC502. If a PAC502 is not installed or there are any other questions regarding the installation of this accessory, immediately contact a Chief Customer Service representative.

**WARNING:** IMPROPER INSTALLATION CAN LEAD TO MOUNT FALLING CAUSING SEVERE PERSONAL INJURY OR DAMAGE TO EQUIPMENT! DO NOT deviate from installation instructions provided. DO NOT substitute hardware.

1. Align mounting holes at top of PXR with two mounting holes in PAC502. (See Figure 14)

**Figure 14**

2. Using two 5/16-18 x 5/8" button head cap screws (CC), two 5/16" split lock washers (EE), and two 1/4" flat washers (DD) loosely secure top of PXR in PAC502. Secure screws at least three turns into PAC502. (See Figure 15)

**Figure 15**

3. Carefully remove hook and loop straps from each PXR arm.

**NOTE:** The arms are not engaged in the PXR at this time.

4. Carefully pull PXR arms out from PAC502. (See Figure 16)

**Figure 16**

5. Remove and save two screws from lower cover. (See Figure 17)
6. Remove and save lower cover. (See Figure 17)

**Figure 17**

7. Carefully lift up and out slightly on bottom of PXR. (See Figure 18)
8. Route power cord and cables through cable management areas as noted. (See Figure 18)
9. Tighten fasteners to secure top of PXR into PAC502.

Figure 18

10. Secure bottom of PXR in PAC502 using two 5/16-18 x 5/8" button head cap screws (CC), two 5/16" split lock washers (EE), and two 1/4" flat washers (DD). (See Figure 19)

Figure 19

11. Replace lower cover and secure with two Phillips head screws removed in Step 5. (See Figure 20)

Figure 20

### Trim Installation (Optional)

Install PAC502 trim (optional) following the instructions included with the PAC502 kit.

### Arm Engagement

**NOTE:** If the PXR is installed in an in-wall box, proceed to **Step 2**.

1. Carefully remove hook and loop straps from each PXR arm.

**NOTE:** The arms are not engaged in the PXR at this time.

2. Carefully pull arms out from wall. (See Figure 21)

Figure 21

3. Open cable management covers on bottom of PXR arms.
4. Engage PXR arms by lining up pin with opening and using 9" hex head wrench (Y) in opening on bottom of each arm. (See Figure 22)

**IMPORTANT !** : Engage arms by turning fastener to the LEFT.

Figure 22

**CAUTION:** PXR SHOULD ONLY BE MOVED USING REMOTE CONTROL!! After the PXR arms have been engaged, do NOT move PXR by hand!

### Installing IR Sensor

1. Plug IR receiver (BB) into PXR. (See Figure 3) and (See Figure 23)
2. Route IR receiver to desired location. The IR receiver operates best in open, unobstructed areas.

**NOTE:** The final location of the sensor won't be made until after installation of the display.

Figure 23

### Attach Interface Brackets to Display

1. Align the center of the interface bracket (V) with center of screen. (See Figure 24)

**NOTE:** The diamond-shaped hole in the bracket corresponds to the center of the mount.

2. Select correct screws, spacers (if necessary) and universal washers from the hardware bag (A-N) and attach brackets (V) to back of display. (See Figure 24)

Figure 24

**WARNING:** IMPROPER INSTALLATION CAN LEAD TO DISPLAY FALLING CAUSING SERIOUS PERSONAL INJURY OR DAMAGE TO EQUIPMENT! Using screws of improper size may damage your display. Properly sized screws will easily and completely thread into display mounting holes. If spacers are required, be sure to use longer screws of the same diameter.

**CAUTION:** THE INTERFACE BRACKETS ATTACHED TO THE DISPLAY MUST BE THE FURTHEST POINT OF PROTRUSION FROM THE DISPLAY BACK. If the display has any protrusions from the back it may be necessary to add spacers during attachment to the interface brackets, so that interface brackets are furthest protrusion from back of PXR. (See Figure 25)

Figure 25

## Hanging Display on PXR

1. Hang display onto the PXR, ensuring that top hooks of interface brackets (V) are hooked over the PXR top rail. (See Figure 26)

Figure 26

**IMPORTANT !** : Do NOT operate PXR with display off-center. Measure to verify that display is centered on the PXR. (See Figure 27)

Figure 27

2. Lock display with attached interface brackets to PXR using two bracket locks (W) and four 1/4-20 x 1/2" hex head cap screws (U). (See Figure 26) and (See Figure 28)

Figure 28

## Cable Management

**NOTE:** Available points of cable management are illustrated (See Figure 29) and specifically called out in the following instructions and figures.

**CAUTION:** PXR SHOULD ONLY BE MOVED USING REMOTE CONTROL!! After the PXR arms have been engaged, do NOT move PXR by hand!

Figure 29

**IMPORTANT !** : If possible, place display's power and signal cables in separate PXR arms.

1. Open cable management covers on top of both PXR arms. (See Figure 29) and (See Figure 30)

**Figure 30**

2. Extend cables from display and lay cables within top of arms. (See Figure 31)
3. Close cable management covers, being careful to not pinch cables under covers. (See Figure 31)

**Figure 31**

4. Continue cable down outside of arms.

**NOTE:** Do NOT route cables through center pin. (See Figure 31)

5. Open cable management covers on bottom of both PXR arms and lay cables within arms. (See Figure 29) and (See Figure 32)

6. Close cable management covers, being careful to not pinch cables under covers. (See Figure 32)

**Figure 32**

7. Continue to route cables through vertical cable management slots. (See Figure 33)

**Figure 33**

8. If necessary, use cable management flap on PXR base to route cables from left arm to PXR right side. (See Figure 29) and (See Figure 34)

Figure 34

**CAUTION:** PINCH POINTS! Keep fingers, hands and cables out of pinch point areas.

9. Add plastic covers (P) to PXR, fastening with two 8-32 x 1/4" Phillips flat head screws (S). (See Figure 35)

Figure 35

**WARNING:** If the display is changed, cables are re-routed, or an accessory is added/removed, it is best to recalibrate the PXR by going through the learn mode sequence. Failure to do so may lead to injury.

10. Use Velcro disc (shipped with IR receiver) to attach the IR sensor (BB) in a convenient location for your installation.

**IMPORTANT ! :** Ensure that IR sensor "eye" has line-of-sight to the remote control signal.

### Final Attachment to Wall Mounting Bracket

**NOTE:** For wood stud and concrete wall installations only.

1. Make final attachment of PXR to wall mounting bracket using two 8-32 x 3/8" buttonhead cap screws (T). (See Figure 36)

Figure 36

### Set-Up and Configuration

**WARNING:** PINCH HAZARD! FINGER OR HANDS BETWEEN MOVING PARTS CAN LEAD TO SEVERE PERSONAL INJURY! Keep fingers and hands away from PXR arms when in operation.

Setting or changing the configuration of the PXR is done through the remote control provided with the mount.

The remote control has a maximum range of 20-30 ft (6-9m), and is powered by 2 AAA batteries that are accessed from the back of the remote.

**NOTE:** The PXR is shipped with a **HOME** position already installed. This **HOME** consists of:

- Arms collapsed completely against mount
- No pan left or right
- Display tilted up

## Running LEARN MODE

1. Plug power cord (Z) into PXR and into the nearest power source.

**NOTE:** Once power is applied to the unit, the indicator lights will flash 5 times. This indicates the unit needs to be calibrated to your specific screen.

**CAUTION:** PXR SHOULD ONLY BE MOVED USING REMOTE CONTROL!! After the PXR arms have been engaged, do NOT move PXR by hand!

**CAUTION:** ENSURE INTERFACE BRACKETS ARE LOCKED TO THE PXR RAILS BEFORE BEGINNING LEARNING MODE! The display must be centered on the PXR so that the learning mode can be completed successfully.

**NOTE:** The **LEARN MODE** is used to calibrate the PXR for use with the specific display which has been attached to it.

**IMPORTANT ! :** Do NOT touch the PXR at any point during the operation of the PXR.

- If the process is cancelled at any point during Phase A or B it will need to begin again from Phase A.
- If the PXR is stopped during **LEARN MODE**, it must be exited completely.
- To exit **LEARN MODE**, press and hold **[STOP]** for 7 seconds. If no other errors are found, the unit will flash 5 times indicating it must go through the **LEARN MODE**.

### • LEARN MODE Phase A

Phase A of the **LEARN MODE** helps the PXR "learn" the amount of resistance caused by the weight of the attached display. **Phase A will be automatically run by the PXR.**

**NOTE:** All buttons (except the **[HOME]** button) on the remote control act as an emergency stop. Pressing the **[HOME]** button will cause the unit to completely restart the **LEARN MODE** Phase A process beginning with Step 2.

1. Press and hold **[SAVE]** for at least 3 seconds, followed by **[STOP]-[RETRACT]-[PAN RIGHT]-[EXTEND]-[PAN LEFT]-[RETRACT]-[EXTEND]** to begin **LEARN MODE Phase A**.

**NOTE:** This sequence must be completed within 10 seconds or the system will "time-out".

PXR moves through several cycles of extending, retracting and tilting before stopping.

### End of LEARN MODE Phase A

[The PXR should be fully extended, centered, and tilted slightly at the end of **LEARN MODE Phase A**.]

Figure 37

### • LEARN MODE Phase B

**NOTE:** During Phase B Mode only the **[PAN LEFT]** and **[PAN RIGHT]** buttons will be active.

Phase B of the **LEARN MODE** helps the PXR "learn" the dimensions of the attached display.

**NOTE:** The PXR will operate at a slower than normal operating speed during **LEARN MODE Phase B**.

**NOTE:** PXR should be fully extended and tilted slightly.

1. Pan PXR to left until the inside edge of display is at least 2" away from the wall. (See Figure 38)

Figure 38

2. Press and hold **[SAVE]** for at least 3 seconds to save left side dimension. [PXR will now pan to center and remain tilted and extended.]
3. Pan PXR to right until the inside edge of display is at least 2" away from the wall. (See Figure 38)
4. Press and hold **[SAVE]** for at least 3 seconds to save right side dimension.

The PXR pans to left limit, back to right limit, repeats, tilts up and returns to HOME position before stopping.

#### End of LEARN MODE Phase B

**IMPORTANT !** : The **LEARN MODE** should now be complete, and all values learned are now committed to the PXR memory.

**NOTE:** Each time the PXR loses power it will automatically recalibrate its position by going to the **factory-set HOME** position. Press any button on the remote control after the unit has regained power to start the automatic recalibration. **NEVER restrict the PXR from going to the HOME position.**

#### Saving a Preset

1. Use remote control to move PXR to desired position.
2. Press and hold **[SAVE]** for at least 3 seconds, and then the desired preset button **[I]**, **[II]**, **[III]** or **[IV]**.

## ADVANCED SETTINGS

**NOTE:** Normal operation is a green light slowly fading on/off (seen through main control board housing).

**NOTE:** If red light is on without blinking, the IR receiver cable may not be completely plugged in.

### IR Repeat Conditions

**NOTE:** The PXR is equipped with a built-in IR repeater that works with most IR transmitters (38kHz).

**NOTE:** The IR repeater cable must have a 3.5mm Mono plug.

1. Plug an IR repeater cable (not included) into the I/O board. (See Figure 3)
2. Route IR repeater cable to the desired device.

### Heavy Screen Mode

**NOTE:** The PXR is equipped with a "Heavy Screen Mode" that allows it to compensate for heavy or thick screens. By enabling this feature, the PXR will gain an additional 2°-3° of upward tilting.

1. Remove the plastic cover from the main circuit board. (See Figure 39)

Figure 39

2. Use a small screwdriver or small pointed object to flip DIP Switch 1 on the main control board to the "off" position. (See Figure 39)
3. Replace plastic cover over main circuit board.

### Setting PXR Address

**NOTE:** If multiple PXR's or Chief automated products will be controlled in the same area **AND** need to have **UNIQUE** command codes, the PXR or other Chief automated product will need to have its address changed.

1. Determine what address is not used by another Chief automated product.
2. Using the DIP switches on the I/O interface (See Figure 39), set the PXR to one of the unused addresses. (See Figure 40)

Address Value	Switch Number			
	1	2	3	4
0	OFF	OFF	OFF	OFF
1	ON	OFF	OFF	OFF
2	OFF	ON	OFF	OFF
3	ON	ON	OFF	OFF
4	OFF	OFF	ON	OFF
5	ON	OFF	ON	OFF
6	OFF	ON	ON	OFF
7	ON	ON	ON	OFF
8	OFF	OFF	OFF	ON
9	ON	OFF	OFF	ON
10	OFF	ON	OFF	ON
11	ON	ON	OFF	ON
12	OFF	OFF	ON	ON
13	ON	OFF	ON	ON
14	OFF	ON	ON	ON
15	ON	ON	ON	ON

Figure 40

3. If the address of the PXR is changed, the remote control and any RS-485 commands will also need to be changed to match it. See the Advanced Programming document for further information.

## RS-485 Commands

**NOTE:** See Advanced Programming document (XXXX-XXX) for more advanced information on RS-485 control.

### RS-485 Command String Syntax

SOM	Product ID	Address	Command	Command Input*	Check Code	EOM
>	06	00	XX	XX	XX	<CR>

\* Command Input is only required for specific commands and may not be needed. See Advanced Programming document for more details.

## RS-485 (2-wire) Programming

Figure 41

Terminal Block Manufacturer: Molex (See Figure 41)

- Terminal Block Manufacturer P/N: 39500-0006
- Terminal Block Pin Outs:
  - Blank
  - TDA (-)
  - TDB (+)
  - Ground
  - Blank
  - Blank
- Wire terminal block using 16-30AWG wire.

### Common Commands

The PXR ships with the default address of 00 (all I/O DIP switches set to "Off").

The PXR has a product ID code value of 06.

Description	Command Input	Command with Check Sum
Cancel Move (Stop)		>0600037E

Goto Home	00	>06000200DD
Goto Preset 1	01	>06000201DE
Goto Preset 2	02	>06000202DF
Goto Preset 3	03	>06000203E0
Goto Preset 4	04	>60002040E1

In order to move the PXR incrementally, the remote control must be used. The only way to move the PXR with RS-485 is by commanding it to go to the Home position or a predefined preset. See **Saving a Preset** section for more information.

### IR Receiver Pinout

Figure 42

### Fault Conditions

**IMPORTANT !** : If the PXR control system sees a fault condition it will stop the operation. A green light will flash on the main control board (visible through the control housing). (See Table 1) A red light will flash the same code on the I/O board.

**NOTE:** Each time the PXR receives an IR command, the red light will blink inside the I/O board.

If there are repeated faults or faults not listed in Table 1, please contact Chief Customer Service.

Table 1: Fault Codes\*

Fault Code (# of blinks)	Description	Corrective Action
0	System is OK and working normally	None
4	System has stalled	Pressing [STOP] will clear this error. It doesn't fix the problem, but will make the PXR operational again.
	•Weight of display has changed	Re-run the LEARN mode sequence
	•Cables are tied too tight	Review cable management, leaving enough slack so that cables are never too tight.
	•PXR path is obstructed	Remove any obstructions from path of PXR. Press [STOP] to clear error code.
5	Not programmed (or has lost programming) to recognize size of screen	Re-run the LEARN mode sequence

\* Refer to Advanced Programming document for additional fault codes and information.
