Ergotron® Product Update

Motion Computing Tablet C5 Interface Bracket Accessory

Background

Ergotron offers an accessory (60-588-200) to mount the Motion Computing C5 Tablet to the StyleView cart or the Neo-Flex Mobile WorkSpace. This bulletin describes mounting options for this bracket.

Motion Computing C5 Tablet

C5 Interface Bracket
60-588-200

Rear Mount Option

The C5 can be mounted on the rear of either cart utilizing the interface bracket and the t-slot on the rear column. T-slot brackets are included with the bracket. The rear mounting option gives the user the flexibility to mount a larger external monitor on the front to use when the tablet is docked.

Front Mount Option

If a user would like to mount the C5 on the front of a cart they will need to remove the five inch lift and replace with a new pivot. They can use either the Ergotron single pivot (47-087) or the Tablet PC Pivot Extension (47-095).

Option 1 47-087 + 60-588-200

Option 2 47-095

Tablet PC Pivot Extension

Make any StyleView configuration a tablet PC cart with the addition of this pivot extension. It interfaces directly with **VESA-compliant** tablet PCs and docking stations. If your tablet is not VESA compliant, an additional interface bracket is required.

The 60-588-200 is not needed with this pivot. The pivot itself stands far enough off the riser to tilt back and match the angle on the bottom of the C5 dock.

Note: The bottom of the C5 dock is VESA compliant.

Please feel free to contact me if you have any questions. Thank you.
