move! workstations

sit-to-stand adjustability

The move! crank tables are designed to meet a user's seated adjustability needs at an economical price range. The durable steel frame and feet are manufactured in 14 gauge oval tube with welded construction. Each upright leg encapsulates an individual worm gear mechanism that is transversed by a high performance self-lubricating bicycle chain for operation. The crank handle is top mounted by the user to maintain a neutral wrist position during raising or lowering. The only cross member is cantilevered to the rear of the frame and covered with a rubber material for additional use as a foot rest.

The single octagonal column Move! spring and electric table versions are created of durable steel with welded construction. Ease of movement during the transition from sit to stand range is enhanced and stabilized with eight roller bearings along the central shaft. The immediate response version is driven by two leaf springs creating linearity at all positions along the travel whether raising or lowering. The Move! electric version contains a power driven linear actuator which operates at 1.5" per second and lifts an operational load of 150 pounds. This model plugs into any 120 v outlet but operates through a transformer on 12 volt DC current.

All tables are cycle tested and static load tested to meet or exceed the required ANSI-Bifma standards.

adjustment

C **crank operation**
Low profile corrugated steel channel spans horizontally under the surface and houses a crank controlled self-lubricating chain for smooth adjustment

S **spring operation**
gas spring to perform a braking function and lock out operation if the table weight is overloaded. The same mechanism also works as the dampener to provide soft starts and stops anywhere along the column or at full top or bottom position.

E **electric operation**
Tables come standard with electronic controls for smooth 1.5" /sec adjustment from sit-to-stand positions. Digital display and multi-setting controls available for an up-charge.

specification guide

adjustment

crank
spring
electric

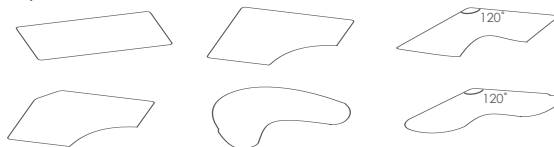

height range:

single surface crank **23" - 35.5"**
single surface spring **26" - 45"**
single surface electric **26" - 45"**

top configurations & layouts:

We make our tops to actual sizes to fit within panel systems and to meet ANSI / BIFMA standards.

weight load:

400 lb static weight load
220 lb operational load on **CRANK**
30 lb equipment load on **SPRING**
150 lb operational load on **ELECTRIC**

leg styles:

cantilevered 2 leg (crank)
single column V-base or H-base (spring & electric)

upgrades:

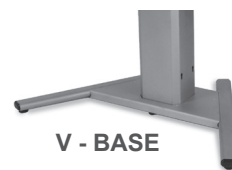

casters, leg mounted CPU holder, computer shelf and voice data receptacles

frame options:

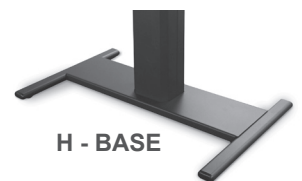

charcoal • aluminum

assembly:

5 mm allen wrench

V - BASE

H - BASE

spring & electric table

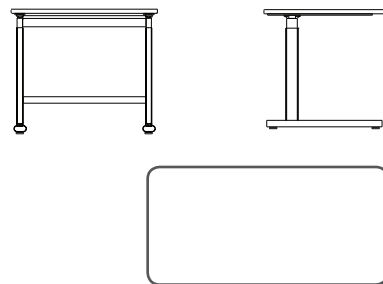

CRANK move!

23" - 35.5" seated height range. available with casters. removable crank adjustment.
