

Installation and Assembly:

Pull-out Swivel Wall Mount with Universal Adapter  
Bracket for 32" - 58" Flat Panel Screens

---

**Models:** SP850-UNLP-GB, SP850-UNLP-GS, RTPS58I, RTPS58SI

Max Load Capacity: 150 lb (68 kg)

**Note:** Read entire instruction sheet before you start installation and assembly.

## **WARNING**

- Do not begin to install your Peerless product until you have read and understood the instructions and warnings contained in this Installation Sheet. If you have any questions regarding any of the instructions or warnings, please call Peerless customer care at 1-800-729-0307.
- This product should only be installed by a qualified professional.
- Make sure that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.
- Never exceed the Maximum Load Capacity of 150 lb (68 kg).
- If mounting to wood wall studs, make sure that mounting screws are anchored into the center of the studs. Use of an "edge to edge" stud finder is highly recommended.
- Do not lift more weight than you can handle. Use additional man power or mechanical lifting equipment to safely handle placement of the screen.
- Tighten screws firmly, but do not overtighten. Overtightening can damage the items, greatly reducing their holding power.

### **Tools Needed for Assembly**

- stud finder ("edge to edge" stud finder is recommended)
- 3/8" socket wrench (3/8" extended driver is recommended)
- phillips screwdriver
- drill
- 1/4" bit for concrete and cinder block wall
- 5/32" bit for wood stud wall
- level
- 6 mm allen wrench
- scissors

**1** Snap installation tab off of wall mount assembly (A).

## Installation to Wood Stud Wall

### ⚠ WARNING

- Make sure that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.

**2** Using a stud finder, locate the edges of the wood studs used in mounting this product. Use of an edge-to-edge stud finder is highly recommended. Based on its edges and using a level, draw a vertical line down the center of each stud. Mark a point (**point 1**) on the right stud centerline where upper right slot will be located. Using a level, mark a point (**point 2**) on the left stud centerline level with point 1 as shown in figure 2.1. Drill  $5/32$ " diameter holes  $2-1/2$ " deep through studs at the two points. Loosely fasten wall mount assembly (**A**) to wall using two #14 x  $2-1/2$ " wood screws (**D**) as shown in figure 2.2. Level, hold, and then tighten screws.

Mark two more points for bottom slots on the right and left stud centerlines. Drill  $5/32$ " diameter holes  $2-1/2$ " deep through studs at the two points. Using two #14 x  $2-1/2$ " wood screws, fasten bottom of wall mount assembly to wall as shown in figure 2.3.

**Skip** to step 3 on page 7.

fig 2.1

CL = stud centerline

fig 2.2

### ⚠ WARNING

- Tighten wood screws so that wall plate is firmly attached, but do not overtighten. Overtightening can damage the screws, greatly reducing their holding power.
- Never tighten in excess of 80 in. • lb (9 N.M.).
- Make sure that mounting screws are anchored into the center of the stud. The use of an "edge to edge" stud finder is highly recommended.

fig 2.3

## Installation to Solid Concrete and Cinder Block Wall

### ⚠ WARNING

- When installing Peerless wall mounts on cinder block, verify that you have a minimum of 1-3/8" of actual concrete thickness in the hole to be used for the concrete anchors. Do not drill into mortar joints! Be sure to mount in a solid part of the block, generally 1" minimum from the side of the block. Cinder block must meet ASTM C-90 specifications. It is suggested that a standard electric drill on slow setting is used to drill the hole instead of a hammer drill to avoid breaking out the back of the hole when entering a void or cavity.
- Concrete must be 2000 psi density minimum. Lighter density concrete may not hold concrete anchor.
- Make sure that the supporting surface will safely support the combined load of the equipment and all attached hardware and components.

- 2** Position wall mount assembly (A) at desired position on wall. Use wall mount assembly, making sure that it is level, as a template to mark holes. Drill four 1/4" (6 mm) dia. holes to a minimum depth of 2-1/2" (64 mm). Concrete must be 2000 psi density minimum. Insert anchors (E) in holes flush with wall as shown in figure 2.4. Place wall mount assembly over anchors and secure with #14 x 2-1/2" (6 mm x 65 mm) wood screws (D) as shown in figure 2.5. Make sure wall plate is level and tighten all fasteners.

### ⚠ WARNING

- Tighten wood screws firmly, but do not overtighten. Overtightening can damage the screws, greatly reducing their holding power.
- Never tighten in excess of 80 in • lb (9 N.M.).

### ⚠ WARNING

- Concrete anchors are **not** intended for attachment to concrete wall covered with a layer of plaster, drywall, or other finishing material as shown below. If mounting to concrete wall covered with plaster/drywall is unavoidable, plaster/drywall (up to 5/8" thick) must be counterbored as shown below. Be sure concrete anchors do not pull away from concrete when tightening screws. If plaster/drywall is thicker than 5/8", custom fasteners must be supplied by installer.

fig 2.4

fig 2.5

- 3** Place installation tab over sliding arms of wall mount assembly (A) to lock them in place.

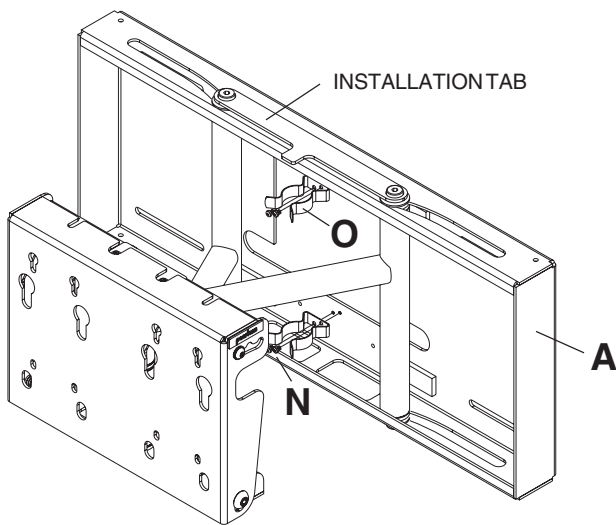

- 4 Optional:** Using scissors, cut bumper strip (I) into two 2" pieces and one 10" piece. Adhere bumper strip pieces to wall mount assembly (A) where indicated by reference marks.

- 5 Optional:** Attach two spring clips (O) to wall mount assembly (A) using four M3 x 4 mm phillips screws (N).

**NOTE:** Remove installation tab after arms are locked.

- 6 Optional:** Attach two cable mounts (J) to wall mount assembly (A) using two M4 x 5 mm phillips screws (H).

**NOTE:** Remove installation tab after arms are locked.

## Installing Adapter Plate

- 7** Thread two M10 x 15 mm screws (**K**), leaving .25" exposed thread, into top holes on back of adapter plate (**EE**). Hook adapter plate (**EE**) to mounting plate and attach using two bottom M10 x 15 mm screws (**K**) as shown in figures 7.1 and 7.2. Tighten screws using 6 mm allen wrench (not included).

MOUNTING PLATE  
(NOTE: MOUNTING PLATE  
SHOWN WITHOUT FULL  
WALL MOUNT ASSEMBLY  
FOR CLARITY)

fig. 7.1

fig. 7.2

## Installing Adapter Brackets

8 Refer to **Screen Compatibility Chart** to determine the proper fasteners to use.

To prevent scratching the screen, set a cloth on a flat, level surface that will support the weight of the screen. Place screen face side down. If screen has knobs on the back, remove them to allow the adapter brackets to be attached. Place adapter brackets (**FF or GG**) on back of screen, align to holes, and center on back of screen as shown in figure 8.1. Attach the adapter brackets to the back of the screen using the appropriate combination of screws, multi-washers, and spacers as shown in figure 8.3.

**Note:** Top and bottom holes must always be used.

Verify that all holes are properly aligned, and then tighten screws using a phillips screwdriver.

### ⚠ WARNING

- Tighten screws so adapter brackets are firmly attached. Do not tighten with excessive force. Overtightening can cause stress damage to screws, greatly reducing their holding power and possibly causing screw heads to become detached. Tighten to 40 in. • lb (4.5 N.M.) maximum torque.

#### Notes:

- The number of fasteners used will vary, depending upon the type of screen.
- Multi-washers and spacers may not be used, depending upon the type of screen.
- Use the corresponding hole in the multi-washer that matches your screw size as shown in figure 8.2.

fig 8.1

**Note:** "X" dimensions should be equal.

### ⚠ WARNING

- If screws don't get three complete turns in the screen inserts or if screws bottom out and bracket is still not tightly secured, damage may occur to screen or product may fail.

fig. 8.2

fig 8.3

# ⚠ WARNING

- Always use an assistant or mechanical lifting equipment to safely lift and position the plasma television.

## Mounting and Removing Flat Panel Screen

- 9** Hook adapter brackets (**FF or GG**) onto adapter plate (**EE**), then slowly swing screen in as shown. Turn screws clockwise at least six times to prevent screen from being removed as shown in detail 1.

**Note:** Tighten using security allen wrench (**HH**).

Screen can be adjusted horizontally if desired.

**Note:** To lock the screen down, tighten screws to adapter plate as shown in detail 1.

To remove screen from mount, loosen screws, swing screen away from mount, and lift screen off of mount.

- 10** Screen can tilt 5° or 10° forward.

**Note:** Screen must be securely attached to mounting plate with all fasteners before adjusting tilt.

To tilt screen 5° forward, lift and pull mounting plate forward until middle notch rests on M6 screw as shown in figure 10.1. Tighten M6 screw.

To tilt screen 10° forward, lift and pull mounting plate forward until rear notch rests on M6 screw as shown in figure 10.2. Tighten M6 screw.

fig. 10.1

fig. 10.2

**11** Roll can be adjusted 1° clockwise or counterclockwise.

To adjust roll, loosen M10 x 15 mm screws (**K**) slightly, leaving them snug. Level screen and adapter brackets, then tighten screws (**K**).

**Note:** When adjusting roll, M6 screws should be tight as indicated in step 7.

SCREEN FASTENER

NOTE: MOUNTING PLATE SHOWN WITHOUT FULL WALL MOUNT ASSEMBLY FOR CLARITY.

**BACK VIEW**

**12** **Optional:** To lock mount in closed position, insert one M5 x 40 mm screw (**DD**) into tapped hole in either top or bottom of flat plate.
