- Rubber Mallet

Parts:

- (1) OM5 backrest roller & axle pin assembly

Repair time:

- Less than 5 minutes total

Figure 1 - Backrest Roller/Axle Pin Assembly

Figure 2 - Backrest Roller Well

## Directions

**step 1.** *Disengage the backrest from the backrest support.* With both hands, place four fingers on each hand on each side of the J-bar. Then place your thumbs over the screws on either side of the backrest support. With your thumbs, press down AND forward to release the backrest.

**step 2.** *Remove the old roller assembly.* With the pliers, gently pry the assembly out. It's easier to start on the non-textured side of the axle pin.

**step 3.** *Make sure to clean any loose dirt and oils from the Backrest Roller Well and Backrest Roller Assembly (see figures 1 & 2.)*

**step 4.** *Insert the new roller assembly into the well.* Lightly tap the backrest roller with the rubber mallet. Make sure the axle pins are flush with the roller well.

**step 5.** *Re-engage the backrest onto the J-bar.* With the backrest leaning against the backrest support, gently press down on the backrest until it "clicks" into place.
