

# The Goldtouch V2 Adjustable Keyboard

## A Message from our CEO

### How the V2 was Born

*When we first came up with the idea for the Goldtouch keyboard we wanted to build a product that brought comfort and adjustability to the forefront of our design. Our goal was to create a keyboard that feels good, and allows each individual to find their unique comfort position... Fast forward 10 years and a couple of different versions of our original keyboard, and not much has changed. That is, until now...*

*Goldtouch is thrilled to introduce our V2 Adjustable Keyboard. Our founding principals, of comfort and adjustability remained the same through this design process. After years of listening to our customer feedback we've updated our design for a sleeker more modern look. We've also added in new hot keys, half keys for Ctrl, Shift, and Caps Lock, and a few feet on the back to allow for a negative slope comfort position. True to our original design we've maintained our signature adjustability from 0-30° on the horizontal and vertical planes, our soft key touch and a commitment to quality products that stand the test of time.*

*We hope you enjoy and we look forward to hearing your feedback. Happy typing.*

*Mark Norwalk, CEO*

## Feature Review

### The Standard to V2 - What's Changed and What's the Same?

We're thrilled to introduce our V2 Keyboard to the market... But we wanted to take a minute to outline some of the new features and assure you that some features (like our signature adjustability and soft key touch) have remained exactly the same.

The first thing you'll notice is our sleeker more modern design. While the rectangular keyboard was functional, we wanted to update the design and make the keyboard look as great as it feels.

The second thing we'd like to point out is our signature adjustability. We've maintained our same patented lever locking design that allows you to adjust the keyboard from 0-30° on the horizontal and vertical planes to ensure that you can find your ideal comfort fit. We've also included 6 new feet on the back of the

GTU-0088 keyboard to allow you to adjust the keyboard in a negative sloping angle for those users that prefer a more dynamic comfort position. The feet also make it easier to fit the keyboard in a keyboard tray.

One of our most exciting new features are the convenient hot keys that make navigating your computer even easier. They are natively supported by your operating system

and don't require any additional driver installation.

Finally, we've added space between the keyboard and Home Row, and made the Cap Lock, Shift and Control buttons half keys to reduce the risk of mistyping. Combined with our soft key touch and low activation force, the comfort of this keyboard can't be beat.
