*Feel better*

If you are a regular computer user you can encounter problems such as pain in your mouse using arm or shoulders and stiffness in your neck.<sup>1</sup> One way of preventing this is to use a Mousetrapper, which is an ergonomic alternative to a standard computer mouse. A Mousetrapper gives you a more varied way of working with a computer, which reduces repetitive strain on your neck and shoulders. What's more, the Mousetrapper can be controlled by either hand, which prevents and counters mouse arm syndrome.

Mousetrapper is a 100% Swedish product with over 500,000 satisfied users today. It has been developed and is manufactured in Stockholm, Sweden.

<sup>1</sup> According to a 2009 survey by Investigo, 47% of computer users experience occasional discomfort and 24% suffer regularly recurring problems.

"As a Chiropractor I treat injuries induced by computer usage, such as RSI (repetitive strain injury), neck and shoulder pain, daily. Using the computer with both hands centred in front of the body as Mousetrapper demands is the smart, ergonomic way to work. Not only do I use Mousetrapper myself but I recommend it to my patients, family and friends."  
**Mike Wilson**
